

TECHNOLOGY OF THE FUTURE

Quantum Nutrition • Plant Technology • Stem Cell Support

50 YEARS OF RESEARCH • 40 PLANT INGREDIENTS • ADVANCED PEC TECHNOLOGY

1 ABOUT OUR TECHNOLOGY

Our focus encompasses stem cell therapy with no side effects using plant technology studied by a European science team for 50 years.

Our proven methods of combined partial extracts of quantum nutrition (plants that are food to the body) allow inside-out and outside-in transformation for **corpus novus (a new body)**.

By stimulating new stem cells, one begins to elevate the amount of new stem cell activity counteracting the old age dying cells (**reverse biological aging**).

Science has already established and well documented that nutrition is the key to enhancing the blood and therefore one's life. This quantum nutrition that stimulates stem cell activity is the new direction for a **chance at a longer life**.

2 THREE KEY COMPONENTS OF LONGEVITY

Research and testing suggest that a chance at a longer life stems from three primary components:

1. OPEN &
CLEAN VEINS

Healthy circulation supports oxygen and nutrient delivery throughout the body.

2. OPEN &
CLEAN ARTERIES

Supports cardiovascular wellness and healthy blood flow.

3. OPEN &
CLEAN LYMPH NODES
(LYMPHATIC SYSTEM)

Supports the body's natural immune and cleansing systems.

Supporting these three systems may help the body function more efficiently in fighting infection and disease.

Continuous and consistent daily use is necessary to create the environment for stimulating new stem cell activity.

3 ADVANCED PEC TECHNOLOGY

iHerQles™ and iRevive™ are extremely exclusive and highly engineered, computer-driven technology products with research and development dating back to WWI.

Using PEC Technology (Partial Extract Combinations), which involves 40 identified plants that are good for the body, this proprietary formula has been designed.

At a **1:150 million ratio** of variables, iHerQles™ and iRevive™ are highly secure and protected from reverse engineering.

4 SAFETY & QUALITY

Because they have no synthetics or chemicals, with little to no chance of drug interactions or reactions, they are designed to support wellness through plant-based nutritional technology.

All plants used are considered safe on major safety reference lists including:

HARVARD
PHARMACOPOEIA
LIST

GRAS
(GENERALLY
RECOGNIZED
AS SAFE) LIST

FDA-RECOGNIZED
SAFE INGREDIENT
REFERENCES

PLANT-BASED • NON-SYNTHETIC • PURITY YOU CAN TRUST

5 RESEARCH & DEVELOPMENT

50 YEARS OF SCIENTIFIC STUDY
Decades of research and development by a European science team.

ADVANCED PLANT RESEARCH
40 identified plants selected for their nutritional support properties.

LABORATORY TESTING
Extensive testing and analysis to ensure quality, safety and effectiveness.

COMPUTER-DRIVEN FORMULATION
Proprietary technology with millions of variable combinations.

PROPRIETARY EXTRACTION TECHNOLOGY
Partial Extract Combination (PEC) process for optimal nutritional synergy.
